AKASH SUDHIR MHATRE

FULL-STACK DEVELOPER

mhatreakash2308@gmail.com | Pune, India | linkedin.com/in/akash-sudhir-mhatre | github.com/Akashmhatredev

SUMMARY

Full-stack engineer, 4+ years: cut dashboard load times 30-50%, cut approval turnaround 50-70%, and reduced data processing latency up to 80% by owning architecture end-to-end — frontend, backend, DevOps, and Databricks pipelines — across CRM, SaaS, and healthcare data platforms serving 50-150K+ users.

EDUCATION

DEGREE	MAJORS	INSTITUTE	YEAR	CGPA/%
Post-Graduation (MSc.)	Computer Science	Pune University	2021-2023	9.18
Graduation (BSc.)	Computer Science	Pune University	2018-2021	8.8

TECHNICAL SKILLS

Core: Vue.js (Vue 3, Quasar) · JavaScript (ES6+) · Flask · REST APIs · PostgreSQL · MongoDB
Data Engineering: Databricks · PySpark / Spark SQL · ETL (Bronze-Silver-Gold) · Dimensional Modeling · SCD · MDM
DevOps & Cloud: Docker · Nginx · PM2 · CI/CD · AWS (EC2, S3) · Azure ADLS · Linux (Ubuntu)
Also: Redis · WebSockets · Node.js · Django · Tailwind CSS · GSAP · Git

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Incentius

May 2022 – Present

Navigator CRM Dashboard

Team of 7 developers

- Cut dashboard and report load times by 30-50% by optimizing SQL queries and API response handling across CRM modules serving 50-60 active business users
- Reduced new-feature development effort by 25-35% by architecting reusable Vue.js component systems used across CRUD-heavy transactional modules managing 1M+ records
- Sustained 99.9% uptime in production while building ECharts-based real-time analytics dashboards for operational monitoring, collaborating directly with 10-15 client stakeholders

Alzain SaaS Platform

Team of 5 developers

- Cut approval turnaround time by 50-70% by designing a configurable workflow engine with digitized approval chains, used by 40-60 operational users across Finance, Inventory, Production, and Management
- Reduced manual accounting and reconciliation effort by 40-60% by building automation and integration processes across financial and transaction datasets exceeding 500K-2M records
- Delivered finance, stock transfer, production, and inventory modules supporting daily operations at 99.9% uptime

Databricks Lakehouse / Data Engineering

Team of 2-3 engineers · Client team of 15-20

- Cut data processing and reporting latency by 60-80% by architecting Bronze-Silver-Gold ETL pipelines in Databricks for healthcare and AI-alert datasets containing 10M+ records
- Reduced manual data prep effort by ~70% by automating data transformation and validation workflows, implementing SCD-based dimensional modeling for enterprise reporting
- Enabled near real-time analytics for 30-50 business and analytics users, supporting a client team of 15-20 stakeholders

Fanztar (Web3 Creator Platform)

Team of 3-4 developers

- Supported 5,000-15,000 registered users by building NFT purchase flows, creator management tools, and reward/token inventory systems
- Improved platform responsiveness through frontend and backend optimizations across datasets spanning hundreds of thousands of transaction records
- Contributed to production deployment, scheduler automation, and payment/reward distribution systems
